

BRIAN ROGERS

captbrogers.dev

github.com/captbrogers

Hey there, it seems you're looking for someone to hire and I'm just the guy for the job. I'm motivated, reliable, and decisive. I can take direction and adapt to changes quickly. I'm excited to learn and looking for a next great opportunity.

I use Fedora Linux on both my desktop and laptop. I am curious about various ways to accomplish a task and love getting my hands dirty with configuration and compiling software.

I'm a family man that loves to barbecue, enjoys a good root beer, and playing old Nintendo 64 games with my kids.

Skills

Laravel
Vue.js
CI/CD
Automated Testing

PHP
MySQL
Redis
MeiliSearch
MinIO

Fedora
CentOS
Ubuntu

Experience

SENIOR SOFTWARE ENG. (Freelance) (Aug 2017 - Current)

Developing a SaaS product to facilitate creating various patterns for those in the crafting community. Utilizing Laravel 12 and Vue 3 I built the MVP that incorporated Stripe for payments, MinIO for document storage, and MeiliSearch for instant search capabilities.

SENIOR SOFTWARE ENG. – Bonzo! (Aug 2024 – Jan 2025)

As a Senior Engineer, I was tasked with leading two other developers for general maintenance and implementing new features on a CRM focused on real estate agents. We maintained a system of automated jobs that could be created by the real estate agent to allow texts, AI voiced phone calls, and emails to be sent to prospective borrowers. We also worked with a large client to implement features they specifically requested.

SENIOR SOFTWARE ENG. – Discover Healing (Feb 2019 – July 2024)

Working with both WordPress and Laravel, I was responsible for upgrading WordPress plugins and implementing a REST API to be consumed by one of the plugins for an embedded Google Map of practitioners. I also assisted with various AWS tasks involving EC2 and RDS instances, as well as IAM users and permissions.

LEAD SOFTWARE ENG. – ControlPad (Oct 2015 – July 2017)

As the lead developer, I architected an e-commerce platform that incorporated generational hierarchy for users, flash sales, and Facebook Live integration. Overseeing a team of 6 other developers, I coordinated tasks, ensured that milestones were met in a timely manner, regularly mentored junior developers, and consulted on additional projects.
